

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis at L1-L2, L2-L3, L3-L4, and L4-L5 levels bilaterally. The stenosis is more pronounced at the L3-L4 and L4-L5 levels, classified as moderate.

Neural foraminal narrowing is noted, with mild to moderate narrowing at L1-L2, L2-L3, L3-L4, and L4-L5 levels on the left side, and moderate narrowing at L1-L2 and L4-L5 levels on the right side. The left L5-S1 level shows severe narrowing, while the right L5-S1 level presents moderate narrowing.

Subarticular stenosis is observed, with moderate to severe stenosis at L2-L3, L3-L4, L4-L5, and L5-S1 levels on the left side. The right side shows mild to moderate stenosis at L2-L3, L3-L4, and L4-L5 levels.

In summary, the patient exhibits mild to moderate spinal canal stenosis and severe neural foraminal narrowing at the L5-S1 level, with moderate to severe subarticular stenosis at the L2-L5 levels. These findings may contribute to the patient's symptoms and should be considered in the management plan. Further clinical correlation and consultation with a specialist are recommended.
