

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI demonstrates moderate spinal canal stenosis at L1-L2, L2-L3, and L3-L4 levels bilaterally. The stenosis is mild at L4-L5 and L5-S1 on both sides.

Neural foraminal narrowing is moderate at L1-L2, L2-L3, L3-L4, and L4-L5 bilaterally, with mild narrowing at L5-S1 on the left and normal/mild on the right.

Subarticular stenosis is moderate at L1-L2 and L2-L3 bilaterally, with normal/mild at L3-L4, L4-L5, and L5-S1. The right side shows severe subarticular stenosis at L5-S1.

In summary, the patient presents with moderate bilateral spinal canal stenosis and moderate bilateral neural foraminal narrowing, with severe subarticular stenosis on the right side at L5-S1. The findings may correlate with the patient's symptoms and should be correlated with clinical examination and further diagnostic workup.
