

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and foraminal narrowing at the L3-L4 and L4-L5 levels bilaterally, with the right side showing moderate narrowing and the left side showing mild to moderate stenosis. Additionally, there is moderate subarticular stenosis at the L4-L5 and L5-S1 levels on the right side, while the left side presents with mild to moderate stenosis.

## Summary:

- Bilateral mild to moderate spinal canal stenosis at L3-L4 and L4-L5 levels.
- Moderate bilateral foraminal narrowing at L3-L4 and L4-L5 levels.
- Moderate subarticular stenosis at L4-L5 and L5-S1 levels on the right side.
- Mild to moderate subarticular stenosis at L4-L5 and L5-S1 levels on the left side.

Recommendation: Further evaluation and management may be necessary, particularly for the right side's severe subarticular stenosis. Consultation with a spine specialist is advised for appropriate treatment planning.
