

# **MRI Lumbar Spine Report**

Certainly! Here's a concise report focused only on degenerative classifications, based on the provided lumbar spine MRI images:

## **MRI Lumbar Spine Report - Degenerative Classification**

### **Findings:**

**Multilevel Disc Degeneration:** There is evidence of disc desiccation and loss of disc height seen at multiple levels.

**Posterior Element Degeneration:** Facet arthropathy is noted.

### **No evidence of:**

**Significant vertebral body pathology.**

**Spinal canal or foraminal stenosis.**

### **Overall Impression:**

The MRI reveals multi-level degenerative changes of the lumbar spine involving the intervertebral discs and facet joints.
