

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate varying degrees of spinal canal stenosis and neural foraminal narrowing at multiple levels.

### 1. Spinal Canal Stenosis:

- L1-L2: Normal/Mild
- L2-L3: Normal/Mild
- L3-L4: Severe
- L4-L5: Moderate
- L5-S1: Normal/Mild

### 2. Neural Foraminal Narrowing:

- Left: Normal/Mild at all levels (L1-L5, S1)
- Right: Normal/Mild at all levels (L1-L5, S1)

### 3. Subarticular Stenosis:

- Left: Moderate at L1-L2, Normal/Mild at L2-L3, Severe at L3-L4, Severe at L4-L5, Moderate at L5-S1
- Right: Normal/Mild at L1-L2, Normal/Mild at L2-L3, Moderate at L3-L4, Severe at L4-L5, Moderate at L5-S1

In summary, the patient exhibits mild to severe spinal canal stenosis and subarticular stenosis predominantly in the lower lumbar region (L3-L5). Neural foraminal narrowing is mild and consistent bilaterally. Further evaluation and management should be considered to address the severe stenosis at L3-L4 and L4-L5, which may be contributing to the patient's symptoms.
