

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI of the lumbar spine demonstrates mild to moderate spinal canal stenosis and foraminal narrowing bilaterally between L1-L5 and S1. The stenosis is mild in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on both sides. There is a notable severe left neural foraminal narrowing at L4-L5.

Subarticular stenosis is also present, with mild stenosis observed in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on both sides. The stenosis is moderate in the L4-L5 and L5-S1 regions on the left side.

In summary, the patient exhibits mild to moderate spinal canal stenosis and subarticular stenosis, with a severe left neural foraminal narrowing at L4-L5. No significant abnormalities were noted in the right side. Clinical correlation is recommended to guide management.

Reported by: [Name of the Radiologist]
