

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and neural foraminal narrowing bilaterally between L1-L5 and S1. The stenosis is mild in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on both sides. The left neural foraminal narrowing at L5-S1 is severe, whereas the right side shows moderate narrowing between L2-L5.

Subarticular stenosis is noted as mild in the L1-L2 and L2-L3 regions on both sides. The left side demonstrates moderate stenosis between L3-L4, L4-L5, and L5-S1, while the right side exhibits moderate stenosis between L3-L4, L4-L5, and L5-S1.

In summary, the patient presents with mild to moderate spinal canal stenosis and severe left neural foraminal narrowing at L5-S1, along with moderate subarticular stenosis on both sides. Further clinical correlation and management plan are recommended.
