

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and neural foraminal narrowing at the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 levels bilaterally, with the exception of moderate narrowing at the L4-L5 and L5-S1 levels on the left side. Additionally, severe subarticular stenosis is noted at the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 levels on the left side, while the right side presents mild to normal stenosis.

In summary, the patient exhibits mild to moderate spinal canal stenosis and neural foraminal narrowing at multiple levels, with severe subarticular stenosis localized to the left side. Further evaluation and management should be considered to address these findings and alleviate any associated symptoms.
