

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI lumbar spine demonstrates mild to moderate spinal canal stenosis and neural foraminal narrowing bilaterally from L1-L5 to S1. The stenosis is mild in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on both sides. The left side shows moderate stenosis at L3-L4 and severe narrowing at L5-S1. The right side exhibits moderate narrowing at L4-L5.

Neural foraminal narrowing is mild in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on the left side, with moderate narrowing at L3-L4 and severe narrowing at L5-S1. The right side shows mild narrowing in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions, with moderate narrowing at L4-L5.

Subarticular stenosis is mild in the L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 regions on both sides, with moderate stenosis at L4-L5 on the left side.

Overall, the findings suggest mild to moderate spinal canal stenosis and neural foraminal narrowing, with more significant involvement on the left side, particularly at the L5-S1 level. The subarticular stenosis is mild to moderate bilaterally. Clinical correlation and further evaluation are recommended to guide management.
