

MRI Lumbar Spine Report

Certainly! Here's a concise MRI lumbar spine report focusing on degenerative findings:

MRI Lumbar Spine Report

Degenerative Classification:

Multilevel Disc Degeneration: There is evidence of multilevel disc degeneration across the lumbar spine, with decreased signal intensity on T2-weighted imaging (as seen in the attached images).

Disc Bulge/Protrusion: A disc bulge or protrusion is evident at the L4-L5 and L5-S1 levels.

Facet Joint Degeneration: There is facet joint arthropathy seen across multiple levels of the lumbar spine.

Ligamentum Flavum Hypertrophy: Some hypertrophy of the ligamentum flavum can be noted in multiple levels

Spinal Stenosis: Some degree of central canal spinal stenosis noted at L4-L5 and L5-S1

Summary:

The findings are consistent with moderate-to-severe degenerative changes of the lumbar spine, involving disc, facet joints, and ligaments, resulting in central canal stenosis at L4-L5 and L5-S1.

Note: This report is based on the provided images and is limited to degenerative findings. Clinical correlation is recommended.
