

# **MRI Lumbar Spine Report**

## **MRI Lumbar Spine Report:**

The MRI lumbar spine demonstrates mild to moderate spinal canal stenosis and foraminal narrowing at the L1-L2, L2-L3, L3-L4, and L4-L5 levels bilaterally, with moderate stenosis at L5-S1. There is also moderate left and severe right subarticular stenosis at L5-S1. Overall, the findings are consistent with mild to moderate degenerative changes in the lumbar spine, with more significant pathology noted at the L5-S1 level. Clinical correlation is recommended to guide management.
