

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and neural foraminal narrowing at the L3-L4 and L4-L5 levels bilaterally. The L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 levels show mild stenosis and foraminal narrowing.

Notably, moderate left subarticular stenosis is present at the L3-L4 and L4-L5 levels, while severe right subarticular stenosis is observed at the L4-L5 and L5-S1 levels. The left and right neural foraminal narrowing at the L3-L4 and L4-L5 levels are moderate, while the rest of the levels show mild to normal stenosis and foraminal narrowing.

In summary, the patient has mild to moderate spinal canal stenosis and neural foraminal narrowing at the L3-L4 and L4-L5 levels, with moderate left subarticular stenosis and severe right subarticular stenosis. Further evaluation and management are recommended to address the identified abnormalities.
