

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate moderate spinal canal stenosis at L1-L2, L2-L3, L3-L4, and L4-L5 levels bilaterally. The stenosis is mild at L5-S1 on the left side.

Neural foraminal narrowing is observed, with mild to moderate stenosis at L1-L2, L2-L3, and L3-L4 on both sides. The left side shows severe narrowing at L4-L5, while the right side presents moderate narrowing at L3-L4. The L5-S1 foraminal spaces are mildly narrowed on both sides.

Subarticular stenosis is severe at L2-L3, L3-L4, L4-L5, and L5-S1 on the left side, and moderate at L1-L2 and L2-L3 on the right side. The L5-S1 subarticular space is mildly narrowed on both sides.

In summary, the patient exhibits moderate spinal canal stenosis and severe neural foraminal narrowing at L4-L5 bilaterally, with severe subarticular stenosis at L2-L5 on the left side. Mild to moderate foraminal narrowing and subarticular stenosis are present on the right side. The L5-S1 foraminal and subarticular spaces are mildly narrowed bilaterally. Further clinical correlation and management are recommended.
