

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and neural foraminal narrowing at L1-L2, L2-L3, and L3-L4 levels bilaterally, with moderate stenosis at L3-L4 and severe narrowing at L4-L5 on the left side. The right side shows mild to moderate stenosis at L1-L2, L2-L3, and L3-L4, with severe narrowing at L4-L5.

Subarticular stenosis is noted as mild at L1-L2 and L2-L3 bilaterally, moderate at L3-L4, and severe at L4-L5 on the right side. The left side shows moderate stenosis at L3-L4 and L4-L5, with mild stenosis at L5-S1.

In summary, there is mild to moderate spinal canal stenosis and severe neural foraminal narrowing at L4-L5 on the left side, with moderate subarticular stenosis at L3-L4 and L4-L5. The right side demonstrates mild to moderate stenosis and severe narrowing at L4-L5, with moderate subarticular stenosis at L3-L4. No significant abnormalities were noted at L5-S1. Further clinical correlation and management are recommended based on these findings.
