

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate moderate to severe spinal canal stenosis at L1-L2, L2-L3, and L3-L4 levels bilaterally. The stenosis is severe at L2-L3 and L3-L4 on both sides. The L4-L5 and L5-S1 levels show mild to normal stenosis on both sides.

Neural foraminal narrowing is moderate at L1-L2, L2-L3, and L3-L4 bilaterally, with mild to normal narrowing at L4-L5 and L5-S1. Right-sided foraminal narrowing at L5-S1 is moderate. Subarticular stenosis is severe at L2-L3 and L3-L4 bilaterally, with mild to moderate stenosis at L4-L5 and L5-S1. Right-sided subarticular stenosis at L2-L3 and L3-L4 is severe, with moderate stenosis at L4-L5 and L5-S1.

In summary, the patient exhibits moderate to severe spinal canal stenosis and subarticular stenosis at L2-L4 levels, with mild to moderate foraminal narrowing. The right side shows moderate foraminal narrowing at L5-S1. These findings may contribute to the patient's symptoms and should be correlated with clinical presentation for appropriate management. Further evaluation and consultation with a specialist are recommended.
