

MRI Lumbar Spine Report

Certainly! Here is a concise MRI lumbar spine report focusing solely on degenerative changes, based on the provided images:

MRI Lumbar Spine Report - Degenerative Changes Only

Findings:

Disc Desiccation: There is evidence of disc desiccation and loss of signal intensity, particularly at the L3-L4, L4-L5, and L5-S1 levels.

Disc Bulging/Protrusion: There are broad-based disc bulges/protrusions at the L3-L4, L4-L5, and L5-S1 levels.

Facet Arthropathy: Mild facet joint arthropathy is present at the visualized levels.

Spinal Canal Stenosis: Mild central canal stenosis is present at the L3-L4, L4-L5, and L5-S1 levels, likely secondary to the disc bulging and facet hypertrophy.

Impression:

Multilevel degenerative disc disease, with associated mild central canal stenosis, predominately at the L3-L4, L4-L5, and L5-S1 levels.

Note: This report focuses solely on degenerative changes. Please note this is a limited interpretation based on images provided and full clinical correlation and additional imaging may be needed.
