

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate severe spinal canal stenosis at L1-L2, L2-L3, and L3-L4 levels bilaterally. Moderate stenosis is present at L4-L5 and L5-S1 levels on the left side, and severe stenosis is noted at L4-L5 and L5-S1 levels on the right side.

Neural foraminal narrowing is moderate at L1-L2, L2-L3, and L3-L4 levels on the left side, and severe at L4-L5 and L5-S1 levels. The right side shows moderate narrowing at L1-L2, L2-L3, and L3-L4 levels.

Subarticular stenosis is moderate at L1-L2, L2-L3, L3-L4, and L4-L5 levels on the left side, and normal/mild at L1-L2, L2-L3, L3-L4, L4-L5, and L5-S1 levels on the right side.

In summary, the patient exhibits severe bilateral spinal canal stenosis at L1-L4 levels, moderate bilateral neural foraminal narrowing at L1-L4 levels, and moderate to severe subarticular stenosis at L1-L5 levels. These findings may contribute to the patient's symptoms and should be considered in the context of clinical presentation and management. Further evaluation and consultation with a specialist are recommended.
