

MRI Lumbar Spine Report

MRI Lumbar Spine Report:

The MRI findings indicate varying degrees of spinal canal stenosis and neural foraminal narrowing in both the left and right lumbar spine segments.

Spinal Canal Stenosis:

- L1-L2: Normal/Mild
- L2-L3: Moderate
- L3-L4: Moderate
- L4-L5: Normal/Mild
- L5-S1: Normal/Mild

Neural Foraminal Narrowing:

- Left:
 - L1-L2: Normal/Mild
 - L2-L3: Normal/Mild
 - L3-L4: Normal/Mild
 - L4-L5: Normal/Mild
 - L5-S1: Severe
- Right:
 - L1-L2: Normal/Mild
 - L2-L3: Normal/Mild
 - L3-L4: Moderate
 - L4-L5: Moderate
 - L5-S1: Moderate

Subarticular Stenosis:

- Left:
 - L1-L2: Normal/Mild
 - L2-L3: Moderate
 - L3-L4: Severe
 - L4-L5: Moderate
 - L5-S1: Normal/Mild
- Right:
 - L1-L2: Normal/Mild
 - L2-L3: Moderate
 - L3-L4: Severe
 - L4-L5: Severe
 - L5-S1: Normal/Mild

In summary, the patient exhibits moderate to severe spinal canal stenosis and neural foraminal narrowing, particularly at the L5-S1 level on the left side. Subarticular stenosis is also present, with severe involvement at the L3-L4 and L4-L5 levels on both sides. These findings may contribute to the patient's symptoms and should be further evaluated in conjunction with clinical presentation and treatment planning.
