

# MRI Lumbar Spine Report

## MRI Lumbar Spine Report:

The MRI findings indicate mild to moderate spinal canal stenosis and neural foraminal narrowing bilaterally, with varying degrees of severity.

### 1. Spinal Canal Stenosis:

- L1-L2: Normal/Mild
- L2-L3: Normal/Mild
- L3-L4: Normal/Mild
- L4-L5: Normal/Mild
- L5-S1: Normal/Mild

### 2. Neural Foraminal Narrowing:

- Left:
  - L1-L2: Normal/Mild
  - L2-L3: Moderate
  - L3-L4: Moderate
  - L4-L5: Severe
  - L5-S1: Severe
- Right:
  - L1-L2: Normal/Mild
  - L2-L3: Normal/Mild
  - L3-L4: Moderate
  - L4-L5: Severe
  - L5-S1: Moderate

### 3. Subarticular Stenosis:

- Left:
  - L1-L2: Moderate
  - L2-L3: Severe
  - L3-L4: Moderate
  - L4-L5: Moderate
  - L5-S1: Severe
- Right:
  - L1-L2: Normal/Mild
  - L2-L3: Normal/Mild
  - L3-L4: Normal/Mild
  - L4-L5: Moderate
  - L5-S1: Moderate

In summary, the patient exhibits mild to moderate spinal canal stenosis and neural foraminal narrowing, with the left side showing more severe stenosis and foraminal narrowing compared to the right side. Subarticular stenosis is also present, with the left side demonstrating more severe stenosis than the right side. Further clinical correlation and management plan are recommended based on these findings.
