

MRI Lumbar Spine Report

Certainly, here is a concise MRI lumbar spine report focusing solely on degenerative changes, based on the images provided:

MRI Lumbar Spine Report

Technique: Sagittal T2-weighted MRI of the lumbar spine.

Findings:

Disc Degeneration: There is evidence of mild to moderate disc desiccation and loss of disc height involving the L3-L4, L4-L5, and L5-S1 intervertebral discs.

Facet Arthrosis: Mild facet arthrosis is noted at multiple levels.

Degenerative Classification Summary:

Mild to moderate degenerative disc disease involving the L3-L4, L4-L5, and L5-S1 levels. Mild facet arthrosis is noted at multiple levels.

Impression:

This study demonstrates degenerative changes, primarily mild to moderate disc degeneration and mild facet arthrosis, as outlined above. No evidence of acute findings.

Note: This report is limited to degenerative findings based on provided images only. correlation is recommended for complete assessment.
